

 The word "Lenovo" is rendered in large, white, 3D block letters, appearing to be planted in a rectangular patch of green grass. The grass is interspersed with small white flowers and two bright yellow daisies. A monarch butterfly is perched on the right side of the grass patch. The entire scene is set against a vibrant green background.

Lenovo

How are we doing on sustainability?

At Lenovo, we are committed to Social Responsibility. We strive to do things differently so that we can consistently become better – for our customers, our employees, the communities where we do business, and the environment.

In 2010, we set ourselves a goal; by 2020 we would reduce our scope 1 and 2 GHG (Greenhouse Gas) emissions by 40%.

In fact, the latest (FY2019/20) Environmental, Social and Governance (ESG) Report shows that we achieved a 92% reduction, through a variety of energy efficiency projects, renewable energy installations, and support for several renewable energy projects via renewable energy commodity purchases.

Additional activity includes:

Lenovo trade-in offer

- Focussed on the responsible disposal of unwanted devices
- Encouraging people to trade in their old device with Lenovo, by offering 20% off selected Think Products
- We operate a zero to landfill policy
- We will plant a tree for every device successfully traded in

Lenovo's use of recycled materials in products/packaging

- Eliminated 3100 tonnes of packaging consumption since 2008
- ThinkPad series uses 100% biodegradable or recycled cushioning materials
- Lenovo Eco Backpack uses 83% recycled polyester and polyvinyl butyral (equivalent to approx. 34 plastic water bottles)
- Working with suppliers to reuse packaging used for shipping products between suppliers and factories

Looking to the future – next steps

We are setting new targets that have been approved by the Science Based Targets initiative (SBTi) and support scientific goals to limit global temperature rise to 1.5 degrees Celsius above pre-industrial levels.

By 2030, Lenovo commits to reducing:

- Direct emissions and emissions related to purchased electricity, steam and cooling by 50%
 - Emissions target contributes to limit global warming to 1.5° Celsius, exceeding well-below 2° Celsius minimum for SBTi approval.
- Emissions intensity throughout its value chain by 25%*
 - Ambitious emissions goals in line with current practices

At the same time, we're exploring net-zero emissions by 2050.

From everyday operations to product design and recycling solutions, we pledge to show environmental leadership across all our activities.
