Servium
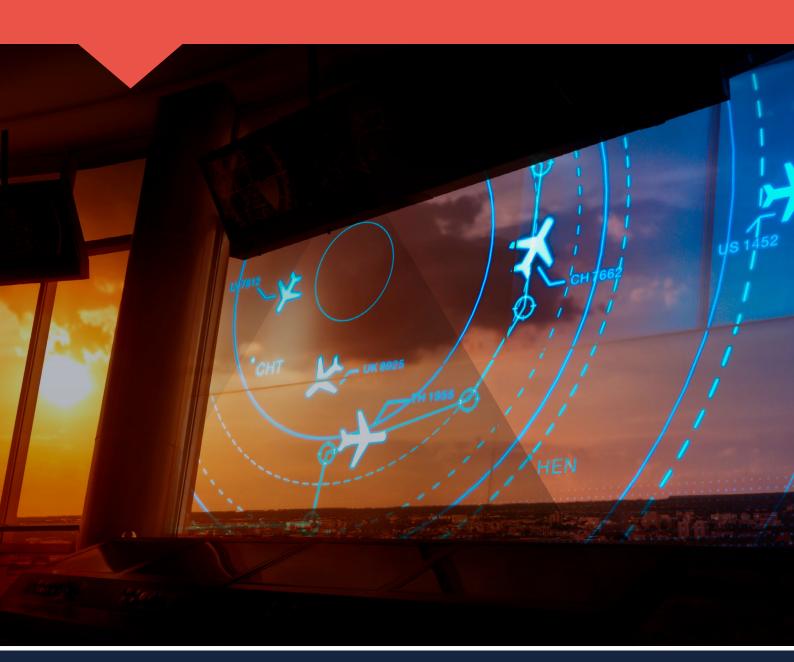

VAPOURTRAIL:
Your flightpath to cloud success

Plot your cloud services course with our easy-to-use management and optimisation platform

Strategic problem:

Many organisations significantly overprovision on IT resources such as compute and storage, while shortcomings in monitoring challenge effective governance surrounding Infrastructure Operations.

The fallout is poor capacity planning and Infrastructure Lifecycle Management, which leads to overspend on hardware and software. When overprovisioning occurs in the public cloud, the problem is exacerbated. Poor governance means that risk is often misunderstood, or even overlooked, leaving cloud services unchecked and leading to excessive costs.

Organisations using VapourTrail Navigate typically identify cost savings of

30%

At-a-glance:

VapourTrail Navigate provides organisations with a simple tool to manage and optimise all their cloud services from one user-friendly platform. Gain visibility across your public clouds, receiving real-time actionable insight that helps optimise ongoing costs – with access to an enterprise-class management and reporting platform to help ensure best-practice cloud governance.

Complemented by access to Cloud Solutions Architects and Certified Cloud Practitioners, VapourTrail Navigate helps your organisation climb higher.

Why use VapourTrail Navigate?

- Deep reporting on your cloud services, powered by enterprise-class tools.

- Actionable insights provided within the dashboard which you can implement at the touch of a button.

- Drive best-practice governance and ensure accountability across multiple clouds.

- Access to a Certified Cloud Solutions Architect to interpret data into transformational actions.

- Access to Proof-of-concept credits to propel your cloud journey and help you realise value faster.

What the platform provides:

✓ VapourTrail Navigate is suitable for organisations using single or multi-cloud environments including AWS, Azure and Google Cloud.

✓ Direct, unlimited access to a customised dashboard with reporting information at your fingertips – covering all aspects of your infrastructure including billing, performance, utilisation and resource tagging.

✓ A holistic overview of your full stack, highlighting any areas where resource efficiency might be improved, or pin-pointing areas for cost optimisation.

✓ Ongoing monitoring of your IT services, enabling you to build up a data-rich view of your cloud over time and make insightful decisions about long-term strategy.

✓ The ability to instantly flex and adapt based on the reports and alerts you receive on your dashboard – stop, start or scale infrastructure, all from within the platform.

✓ Monthly automated reports sent to key personnel within your organisation, which can be customised to align with specific departmental needs and overall organisational goals.

✓ As a VapourTrail Navigate customer you'll have the ability to generate your own customised reports, allowing you to perform precision analysis or present key findings to management and stakeholders.

✓ Quarterly reviews with your dedicated Solutions Architect to help you maximise the potential of VapourTrail Navigate, by further interrogating report data and applying learnings as practical actions.

✓ Benchmark security and compliance against industry standards, receive instant notification of security risks and set up alerts to key stakeholders.

Choose your route to success

✈ Flightpath 1:
Monthly subscription

Subscribe to VapourTrail Navigate for a monthly rate of 3% of your managed cloud spend.

Flightpath 2: ✈
Full cloud services package

Transfer your cloud billing to Servium and receive VapourTrail Navigate free of charge*

*(Subject to Approval)

VapourTrail Navigate in flight

Examples of how the platform is helping steer cloud management today

Organisation A

Needs 360-degree visibility across the multi-cloud services they are running. VapourTrail Navigate quickly consolidates a detailed view of what services Organisation A has running and where they are deployed. The entire multi-cloud infrastructure is now visible from one control panel.
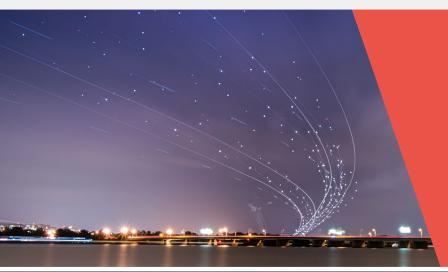

Organisation B

Is not sure if they're over or under-provisioning in the public cloud. VapourTrail Navigate not only assists in their understanding of usage patterns but helps identify performance bottlenecks and opportunities to right-size resource, as well as ways to take advantage of alternate billing mechanisms (including Reserved Instances) or re-platform to exploit cloud-native services.

Organisation C

Wants to achieve better governance and security. VapourTrail Navigate offers IT governance features, including rich reports on tagged resource, automation, policy management and authorisation, to help organisations maintain better compliance. The platform also includes security tools including role-based access controls and automatic administrator alerts when vulnerabilities are detected.

Organisation D

Is not sure when to refresh on-premises hardware or what capacity to budget for this year. VapourTrail Navigate provides detailed analysis of existing on-premises infrastructure and forecasts when capacity (whether that's compute, storage or VMs) is likely to be reached, while identifying if there are any unused resources that could offer a solution. VapourTrail Navigate also contains assessment tools to help identify candidates for migration and gives insight into TCO once workloads have been moved.
